Entrust and SwissSign Deliver Secure Document Signing and Sealing Workflows

Integrated solution provides a document signing platform with multiple signature types for a large number of use cases

HIGHLIGHTS

- Manage online document approvals and agreements with one single platform for employees and signatories

- Simplify and speed up your customer onboarding experience with integrated electronic signing backed by an audit trail

- Enable selected employees to use identity-verified digital signatures based on Entrust trusted certificates

- Seal and timestamp all documents to ensure their integrity and non-repudiation

The problem

Digitization of documents, agreements, and other paper-based processes raises new trust, admissibility, and integrity issues.

With the explosion of remote work and digitization, the requirements for a solution to replace paper-based signatures has grown in complexity. Organizations of all sizes and industries need help finding out which type of signature is required for which use case, and how to properly manage signing processes.

Customers and Partners   **Employees**   **Business workflows and back-end proceesses**
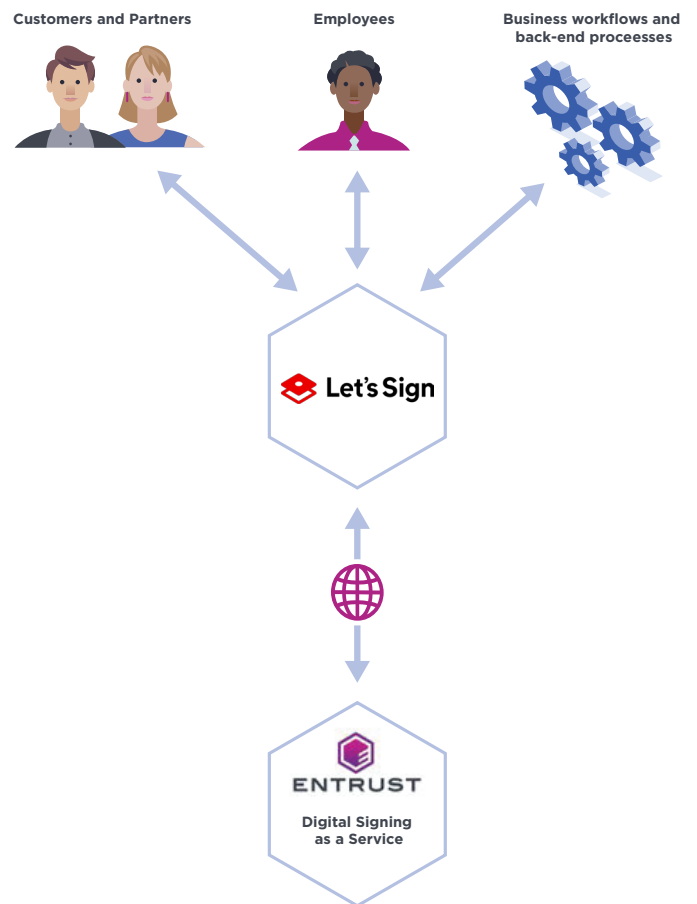

The combined solution is a hybrid deployment: SwissSign's signing platform is installed on-premises and connected to the cloud signing services from Entrust to deliver different signature types.

Entrust and SwissSign Integrated Solution

The challenge

Deploying a solution that not only covers all electronic signing needs, but also checks the legal, compliance, and security boxes.

The best approach to electronic signatures is to look for a solution that can cover multiple use cases via multiple types of signatures, sealing options, and manual/automated scenarios. Organizations may think there's no urgent need for strong employee signatures or document integrity today, but tomorrow, they may face new state, federal, or industry regulations recommending or enforcing digital signatures.

While 100% cloud solutions are becoming a default choice for many organizations due to their significant benefits, they may not be the best option for scenarios where sensitive data is involved. Keeping control of signing processes and where customer agreements are being uploaded for signing is certainly a priority for many companies, especially in healthcare and banking. And it's also important for organizations wary of regulations on personally identifiable information (PII) such as GDPR in the European Union.

The solution

An on-premises deployment for maximum data visibility and control integrated with cloud-based digital certificates for maximum efficiency and convenience.

With the joint Entrust and SwissSign solution for electronic signing, document and signature management is handled by SwissSign's Let's Sign platform, and certificate-based signing services to enable digital signatures for employees are provided by Entrust Digital Signing as a Service.

SwissSign's solution is deployed on-premises and includes a direct integration with Entrust Digital Signing as a Service that can be activated depending on the required signing scenario.

A signing solution built with security and compliance in mind

SwissSign's Let's Sign natively offers electronic signature workflows and easily integrates with Entrust Digital Signing as a Service to provide stronger signatures and seals whenever needed. This combination allows for the broadest coverage of document signing and integrity scenarios such as agreements, approvals, quotes, invoices, tax documents, HR documents, application forms, etc.

SwissSign specializes in signing workflows for the banking sector, so it's no surprise to see how flexible and secure the service is. Key capabilities include:

- Multiple strong authentication options, including single sign-on (SSO)

- Segregation of data in alignment with GDPR

- Native OIDC support

- Signing rooms with different signing options ranging from basic to qualified signatures and seals

- Secure audit trail for a strong body of evidence, user history, and verification APIs for signature integrity

- Custom branding

Let's Sign has everything to provide a smooth, transparent, and secure experience for both employees and customers.

Entrust and SwissSign Integrated Solution

Why use Entrust Digital Signing as a Service with SwissSign Let's Sign?

Digital signatures can be complex to set up. The digital certificates required to generate digital signatures and seals must be stored in secure hardware, and must be issued by a trusted provider.

At Entrust, we live and breathe digital certificates. We've been issuing publicly trusted certificates for over 20 years and are experts in digital certificate management and security. We are a European Qualified Trust Service Provider (QTSP) in the Spanish Trusted List, and a member of the Adobe Approved Trust List (AATL). All our certificates are trusted by Adobe Acrobat software and our qualified certificates are recognised by EU member states (EUTL).

We designed our signing services using our own technology:

- Entrust Identity as a Service for authentication

- Entrust nShield HSMs for key protection and signing

- Entrust Certificate Services for identity verification and certificate issuance

Our expertise and portfolio of solutions for digital signing make us unique in the market.

Our native integration with SwissSign's Let's Sign ensures a smooth, hardware-less experience for secure and trusted digital signatures and seals.

About SwissSign

SwissSign was formed in Switzerland with the objective of becoming a leader in signing portals for the financial industry, a sector known for its stringent policies and rigid processes.

SwissSign's Let's Sign aims to increase the efficiency, compliance, and security of standard processes such as:

- Contracts, proposals, and other agreement signatures

- Investment proposals compliant with the European Financial Services Act (MiFID II/LSFin)

- Customer onboarding

- Any type of document requiring advanced or qualified electronic signatures as defined by the eIDAS regulation in the European Union

About Entrust Digital Signing Solutions

Entrust Digital Signing Solutions keep the world moving safely by helping to establish high assurance, verifiable signatures and company seals for digital documents across public and private environments.

With over 25 years of leadership in the world of PKI and more than 20 years of digital signing expertise, it's no wonder the world's most entrusted organizations trust us for their digital signing needs.
